Abstract:

3D Visualization has becoming more important in today's world. Surveyors see 3D geographic information in a common spatial reference system by moving through the 3D space on terrestrial, airborne and space borne platforms. By enjoying these 3D Models and 3D constructed world, it takes both Land surveying techniques and GIS application, such as finding correspondence between stereo images, defining geographical features such as points, lines, polygons, faces, textures tracked from one image to the next with overlapping or multiple stereo models.

Mr. Thomas Lee would give you a glimpse on how a 3D World being built reflecting the real world for Engineering Surveyors' application.
